

Pranjal Sailwal

I build products end to end: from the question worth asking to the thing that ships.

Computer science graduate, Dehradun, India

THREE THINGS YOU CAN CHECK

98.1%

of the cost increase happened after the click

PROVEN: anyone can re-run it

Growth Intelligence Lab, a three-factor cost bridge on public data

11 of 11

planted changes caught in a live pass, no false positives

DOCUMENTED: written in the project's own files

Appwrite Migration Guard, a live regression pass

68

unit and integration tests

PROVEN: anyone can re-run it

NitroDB, a storage engine with its crash cases tested

WHAT I AM LOOKING FOR

Technical product and programme work: technical product management, product analysis, associate product roles, programme management, and the consulting and implementation roles next to them. I want to be on a team where the question is asked before the build, and where writing things down is normal, because that is also what remote teams run on. I claim no title yet. The projects are the evidence.

WHY ME

Three habits, each with something you can check. I start from the number that does not add up and put a figure on the problem before I design anything. I write the decision down with its reason, so the next person does not have to guess. And I say how each figure is known: proven, documented, or only my word. This site is built the same way.

WHERE TO LOOK
